Project Title: Campus Event Hub

Overview:

Campus Event Hub is a web-based platform where students can browse, search, and register for university events.
It also provides an admin panel for managing events, approvals, and monitoring system activity efficiently.

Group Details:

Group Number: 06
Course Name: Database Management System
Instructor: Fahmidur Rahman Sakib

Objectives of the System:

•Provide a digital platform formanaging university events.
•Allow students to easily discover and register for events.
•Enable administrators to manage events efficiently.
•Maintain structured event data using a relational database.
•Demonstrate full CRUD operations as required in the DBMS course.

Features:

✅ User Registration & Login (with password hashing using bcrypt)
✅ Event Listing with Search (Debounce)
✅ Event Registration System
✅ My Events
✅ Admin Panel (Add, Update, Delete Events)
✅ Approval / Reject System for registrations
✅ Logout System

Technical Architecture:

Frontend: React / HTML,CSS,JavaScript
Backend: Node.js with Express.js
Database: MySQL (XAMPP)
Architecture Flow:
User Interface → Backend API → Database Server

Installation & Setup:

```
# Clone the repository
https://github.com/chandrima2186/Campus_event_hub

# Go to project folder
cd campus-event-hub

# Install backend dependencies
npm install

# Run backend server
node index.js
```

Frontend run:

Open HTML file in browser

Project Structure:

```
